

Amendment to the Abstract:

The Abstract has been amended as indicated below. A revised Abstract is attached.

The invention relates to a web processing roll (1, 2) comprising at least one cavity (3). Said roll is characterised in that the cavity (3) of the roll is at least partially filled with a mixture (4) of a liquid and at least one mixing partner that is insoluble in said liquid. Solid particles, preferably a granular solid, or another liquid constitute said mixing partner.
